The drum on the 2x12 is far too quiet. The original was much more authentic, but this plug-in still captures the essence of great riffs and grooves. As in the original, it exhibits great bass definition and presence. I'm using this with a Rockman 6-LA compressor, and I'm getting some really good results, though not as much low-end clarity. The bass that you get out of this pedal sounds a little bland to me. The only way I can get it to sound good is by dialing back the gain a little. Great pedal, but sounds odd when you crank it
